Newbie needs help
Posted by keithlevine - 2011/07/06 00:31

This code works:

{arisexylightbox activeType="imglist" itemCount="8" dir="images/articles/Mahe36-kl" thumbHeight="90" thumbWidth="85"} {/arisexylightbox}

This code does not:

{arisexylightbox activeType="imglist" itemCount="3" dir="images/articles/Deals" } {/arisexylightbox}

Code displays on the site. Check it out here: http://yachtguru.cloudaccess.net/

ANY help is greatly appreciated!

Thanks!

Hello,

Check that "Mode" parameter is set to "Anywhere" in "System - ARI Sexy Lightbox Anywhere" plugin settings.

Regards,
ARI Soft

Thanks! That worked. Now what's the difference between the two settings and WHERE do I find detailed documentation on this?

Thanks again.

Information about the parameter can be found in tooltip on plugin settings page. In brief, the plugin works only in articles when "Mode" parameter is set to "Content", when it is set to "Anywhere" the plugin works in any content.

Regards,
ARI Soft
