Width of the module

_____

Hi,

I have set the width of the module to 780px. Thumbnails are : 220px X 150px

Layout type : simple gallery
Visible items count : 6
Item per row : 3
Padding : 0
Spacing : 0

My problem is that the exact layout widht is only 750px and not 780px. I don't want space on the right and increase the horizontal space between the thumbnails in order to align the gallery with the text above.

I have take a screenshot to explain my problem. I hope that you'll understand and that you could help.

Many thanks in advance. http://www.ari-soft.com/images/fbfiles/images/problem-3626658161b7c37229dec750c375bd81.jpg

Re:Width of the module

_____

Hello,

Could you specify where do you set module width? Could you provide link to page where we can see the problem?

Re:Width of the module

_____

Hi,

I have set the width in the module parameters. I am not using the plugin but load the module with the {loadposition ...} function.

You can see my problem there :

http://www.ebryde.com/clients/sb/photographe-architecture

Thanks

Re:Width of the module

_____

Try to add the next CSS rule to a site template CSS file:

TABLE.prettyphoto-simple-table TR TD
{
 text-align: center;
}

Hi,

Now it's better, the layout is now centered... but the width is always 750px.

So I have always a small marge on the left and on the right of the layout. I would like to increase the size to 780px in order to aligned on the left and on the right with the text above (see attachment).

Thanks. http://www.ari-soft.com/images/fbfiles/images/width.jpg

_____

You have set width of the lightbox, not width of table with images. Table with images has width equals to 100% and images in table cells are centered. That is looks as you wish, download and upgrade "ARI Pretty Photo" module and add the next CSS rules:

TABLE.prettyphoto-simple-table TR TD.col-first
{
 text-align: left;
}

TABLE.prettyphoto-simple-table TR TD.col-last
{
 text-align: right;
}

Hi,

I have downloaded the V 1.6.1.

How can I upgrade or wich file should I replace please ?

Thanks

_____

Install new version over installed extension through standard Joomla! installation page.
