## Thumbnails for all the galleries are in lightbox

Posted by bitwisefellows5 - 2011/09/30 21:49

---

OK, so I have several "ARI Pretty Photo" modules displayed on my page and they work great... All of the modules are displayed to be a single image and they go to different image folders.

But when I click on an image to open it up in a lightbox, I am able to scroll through all of the images that are in all of my different galleries. I just want to be able to click on one image, have that image open up in a lightbox, and be able to scroll through all of the images that are in the specified folder... but I don't want to be able to scroll through images in all of the galleries that are on that page.

How do I fix this?

Hello,

Does "Group" parameter in modules settings have different values (or set to empty)? If yes, could your provide a link to a page where we can see the problem?

I then set group to: "on"

And then I set a different group to each module.

This fixed the problem.

Thanks!

You can set "Group items" parameter to "Yes" and leave "Group" parameter empty or use unique value for "Group" parameter for each module instance. The lightbox navigates between all items with the same group.
