
Problem displaying a picture in a popup window

Posted by briceandre - 2010/06/15 18:29

Hello,

I am trying to display a picture in a pop-up window when clicking on a hyper-link. I don't want the picture to be displayed in the main page.

I tried the code displayed during the installation of the module, which consists in putting the html code of the displayed popup window in a hidden section.

My problem is that, depending on the properties set to the hidden section, either the content is hidden in both the main window and the popup window, or the content is displayed only in the popup-window (as expected), and in the main window, the space required to display this content is reserved and thus, I have a big hole in my main page.

I also have another problem when I display this picture in the popup window : the popup-window is not large enough and thus, the picture is partially displayed outside this popup window.

The code I use to display my picture is the following :

Thanks in advance for help,
Brice

Hello,

You can use the following code instead of your code:

Voir la photo

Thank you very much.

This works very fine and performs exactly what I expected.

I have still a small question : when I bought this module, it was explained that I needed to generate a license file that depends on my domain name. But I did not found how to generate this license file and everything seems to work without it.

Is it normal or will it be block in a few days ?

Best Regards,

Brice

Don't worry, the extension is open source and doesn't require a license key and it will work without problem.

Hello,

I completed my web-site with this module by using the code you adviced me.

The rendering is very nice and corresponds to what I was willing, but I think there is a small bug.

When displaying a big image, the image is firstly displayed with a reduced size and a small icon at the right-top of the frame allows enlarging it. This icon is not displayed for small images, which is quite convenient.

But, if, on the same page, I have both small and large images, and if I display first a large image and leave it while it was large, the next image displayed is displayed in the small version, but with the icon on the right-top allowing it to be displayed with the small size. If you click on this icon, you still have the small image displayed, but this time, with the icon allowing to enlarge it.

If the second image displayed is a small one, in the same conditions as above, you have an alternance of icons allowing to enlarge or reduce it, but with no effect on the image.

If you close the large image when it is displayed in the small form, you do not have this strange behaviour next time you open an image. If you refresh the page, or display a new one, this strange behaviour disappears too.

Another thing that, I think, is not optimal, is the place where this icon allowing to resize the mage is displayed. In fact, it is displayed on the image. I think it would be a nice idea to be able to display it above the image. In my case, images a

screen captures of windows and this icon is displayed above the icons allowing to hide, resize or close the window, which is a bit confusing for the users.

Best Regards,

Brice

Hello,

We'll investigate the bug with icon and try to provide fix soon. Regarding position of icon, you can add the following CSS rule to template CSS file that show icon above an image:

```
.pp_pic_holder a.pp_expand,
.pp_pic_holder a.pp_contract
{
    top: -20px;
}
```

Hello,

Maybe I did something wrong, but after installing the new version, I still have the same problem. I downloaded version 1.3.2 from your web-site and installed it on my server, but the same strange behaviour is still happening.

For the display of the icon, your css code solved the issue and now, the icon is displayed above the image.

Best Regards,
Brice

Could you clean a browser cache and try again to reproduce issue with resize icon? If problem still appears, could you

provide link to page where we can see this issue?

I flushed the cache of my browser (mozilla) and I still have the same behaviour. I tried with another browser (internet explorer), and the result is the same.

Here is a link to the page with the images. The site is in french. Image links are located in the text.
