Auto Play Video and IE

Posted by QuickStudy - 2010/11/21 15:39
_____

Hi:

There seems to be a slight bug with auto running video and IE. This appears to only affect IE and depends on the users open browser window size.

If set to a small enough size the lightbox renders from the center of the screen and consistently auto plays. If the open browser exceeds a certain size the lightbox transitions from the upper left of the screen and repositions to the center.

While the auto play feature still triggers the video to play, this brief delay in transition causes the video to be hidden from view.

Disabling auto play does solve the problem but is there a parameter that can be changed to delay the auto play?

Good work on the plugin. It was exactly what I was looking for!

Thanks,
Tom

Hello,

Could you specify this problem occurs in all versions of IE browser or only in specific version(s)? Could you also provide link to page where we can see this problem?

Regards,
ARI Soft

_____

Staging site:
http://www.neigerdesign.com/anixtercenter/
(Video is on home page)

IE versions tested on:
7 and 8

Video plays but is not visible when browser is fully expanded. Works fine when browser is minimized and reduced in size.

Download and upgrade "ARI Pretty Photo" module and upgrade jQuery library which is used on your site. Currently it uses v. 1.4.2, it contains some bugs with calculating size of elements in IE, update it to version 1.4.3 or 1.4.4. If you have any difficulties with it, you can provide temporary access to your Joomla! backend by email and we'll help.
