
How to change 'Overlay color' & 'Overlay opacity'

Posted by vlad74999 - 2010/12/08 03:07

Is there a way to change 'Overlay color' and 'Overlay opacity' in prettyPhoto? (there are no such options in params, maybe there is a place in CSS to do that?)

thanks

Hello,

Download and upgrade module and plugins please. We have added "Opacity" and "Overlay color" parameters.

Overlay now works fine in the new version, but it slows down when there is a video in the lightbox (from Vimeo) -- lightbox pops up a bit -- then delays -- and then extends to the proper size.

Can you check why it slows down with videos?

thanks

Where we can see this problem? And what browser you use?

see: howardandabbymilsteinfoundation.org/about-abby-milstein/
(media on the right):

2 issues:

- 1) slows down at start
- 2) close button is cut-off a bit

it happens in IE7, FF; also in all themse

thanks

it's also slows down at the begging in Chrom -- the prev. version was much faster.

Sorry for the delay. New version just contains possibility to change background color of overlay, this is not affected on lightbox speed. The extension works fine on our side, we can create video that you can see that it's true. BTW, could you provide screenshot where we can see the problem with close button?
