
Image in an article

Posted by ivoalves - 2011/02/08 17:14

Hello guys,

I've just get the ARIfancybox today, and I'm having a trouble to get it on an article.

It is lovely to see how it works with a bunch of images, but i just want to get it work on one image, for now...

Is it possible to load a single image and get it work?

Thanks guys

Hello,

Sure, it is possible. Use the following code:

```
{arifancybox thumbWidth="100"}
```

```
{/arifancybox}
```

Where LINK_TO_IMAGE is link to necessary image.

Regards,
ARI Soft

But if i use that code, it will replace the thumb i have with the big image rezise, right?

I Want to use my thumb and when it clicks, show the image in big...

The plugin creates thumbnail for big image and will show big image into lightbox. BTW, you can also use the following code:

```
{arifancybox}
```

```
{/arifancybox}
```

It will work the same as previous code, but big image will look like thumbnail when edit article with this image on backend.

But i need to use my thumbnail because its custom by me to the design of the layout.

There is no way to use MY thumbnail and get the link to the big image?
i'm trying the generateThumbs="false" but its not working...

Use the next code:

```
{arifancybox activeType="rcontent" title="Image" url="LINK_TO_BIG_IMAGE"}  
  
{/arifancybox}
```

Where LINK_TO_BIG_IMAGE is link to big image and LINK_TO_THUMBNAIL is link to thumbnail.

thanks for the last hint, it works :D

Its possible to use my css class to customize the thumbnails? It allows CSS3 properties?

=====

Re:Image in an article

Additional CSS class can be added to HTML element with help "class" attribute of {arifancybox} tag. Code will look like:

```
{arifancybox activeType="rcontent" title="Image" url="LINK_TO_BIG_IMAGE" class="mythumb"}  
  
{/arifancybox}
```

You can place the next CSS rule to site template CSS file that add border around thumbnail:

```
A.mythumb IMG  
{  
  border: 2px solid red;  
}
```

You can use CSS 3 properties, but support of this properties is task of browser. For example IE 6 - 8 doesn't support

CSS 3 properties, but latest version of FireFox, Google Chrome, Safari and Opera browsers support them.

Regards,
ARI Soft
