## Image button instead of \'Link text\'

Posted by edtheartist - 2011/03/06 10:25

---

Hi -

I just purchased fancybox and it's really simple and powerful. However the 'Link text' to invoke our remote content is unacceptable for our use. We need to let the user push an image button perhaps defined in the fancybox joomla module to invoke the fancybox. How may it be done?

thanks  
Ed

We use Joomla 1.5.

Hello,

The following code can be used:

```
{arifancybox activeType="rcontent" opt_width="300" opt_height="250" url="http://www.ari-soft.com" title="ARI Soft"}{/arifancybox}
```

Where IMAGE\_URL is URL to image button.

Regards,  
ARI Soft

Just an update. I simply put an img tag in the Link text box and it works. Nice.

If this is not the recommended way, or something not good may happen, please update.

thanks  
Ed

Thanks for putting this up here. Now I'm trying to remember where the link to the API is, or list of optional parameters is so that I can disable the title.

List of all parameters can be found in "Description" field on plugin settings page.
