
positioning the lightbox

Posted by davidfowkes - 2011/03/24 16:53

Hi,

I am using fancybox to show off some art work for a client. I have set lightbox to resize if the browser is resized - and this seems to work ok. However, I want also to position the lightbox a little more centrally relative to the overlayed site. Can I do it with the CSS - I have tried for ages but I don't seem to be having any luck with it.

www.franziskaschenk.co.uk

In the page [art > varnishing act](#), click on one of the eight the portrait thumbnails .

Am I missing something - how is the position of the lightbox controlled?

=====

Hello,

Try to add the next CSS rule:

```
DIV#fancybox-wrap
{
  margin-top: -75px;
}
```

Regards,
ARI Soft

Thank you very much - looks like it does the job.
