
I do not understand how to work the plugin

Posted by onimaro - 2011/05/08 17:15

I must insert gallery images on my article bat I do not understand how to work the plugin

The images gallery is stored in my site

For see thump and when click on large images, What code should I enter?

=====

Re:I do not understand how to work the plugin

Hello,

If you want to use "System - ARI Fancybox Anywhere" plugin, install "ARI Fancybox" module, install, enable and configure "System - ARI Fancybox Anywhere" plugin. For example if you want to show images from /photos/album1 folder, place the next code to an article:

```
{arifancybox activeType="imglist" thumbWidth="100" dir="photos/album1"}{/arifancybox}
```

If you use WYSIWYG editor, switch it to plain text mode before inserting plugin code because editors can add extra HTML code or decode HTML code in design mode.

PS: More information how to use the module or the plugions can be found on module/plugin settings page in "Description" field.

Regards,
ARI Soft

I use this plugin to show images on one page that work whit jquery - so there is conflict

I must seting in the plugin "anywhere" because otherwise I do not see the pictures, but only the code.

If setting "Include jQuery" NO the pop up don't work, I see the image in white page

If setting "Include jQuery" Yes the pop up don't work

All these setting are test whit jQuery noConflict Yes and NO - Bat I have conflict.

How do I fix

Thank

Could you provide link to page where we can see the problem? If javascript conflict occurs it can be a problem with 3rd party extension.

Regards,
ARI Soft

Yes is conflict whit jreviews because use jquery for work.

In one of the filed I use plugin for see the gallery images

Is test site joomla 1.6.3

Is possibile to send you my account?

Your email is?

I have remove jquery from jreviews, and the gallery work all good, bat there is the form scroll in the page that don't working correctly and when I open crash page

Give me this error firebug

jQuery("#jr_review0Form").scrollTo is not a function

Re:I do not understand how to work the plugin

Posted by admin - 2011/05/08 19:36

It seems jReviews can't work when several jQuery instances are loaded on a page. If you can provide temporary access to your Joomla! backend by email and say link to page where we can see the problem, we will investigate the issue in more details and provide solution.

Now work all good

This site is beta test.

What did you do to fix? So I do well on the main site

Thank

Re:I do not understand how to work the plugin

Posted by admin - 2011/05/09 07:38

It was problem with site template and jReviews. Both of them use jQuery library, but they can't work properly when several jQuery instances are loaded on a page. We disable jQuery loading in jReviews settings and in "ARI Fancybox" module and fancybox plugins and we installed our free plugin "System - ARI jQuery Integrator" that load jQuery library. We can send this plugin by email.
