
JQuery conflict with JReviews 2.3

Posted by WINEMAN - 2011/06/06 13:23

Just upgraded to JReviews 2.3 (<http://www.reviewsforjoomla.com/>) and am experiencing what I think is a jQuery conflict. JReviews is now using jQuery 1.5.2 so how does this affect ARI Fancybox? What changes need to be made to get it to work properly with JReviews 2.3? :(

Hello,

Provide link to page where we can see the problem.

Regards,
ARI Soft
