ARI Fancybox not working
Posted by sheigl - 2011/06/30 00:10
_____

Hi, I'm having problems with Fancybox not functioning properly. I have all the plugins enabled. I've tried to use the module inline, but when I click the link that's supposed to contain the inline content it does nothing.

I also tried using the system plugin with an external site, and all it does is take me to that site, instead of popping it up in a box.

From what I've read in the forum, it may have something to do with jQuery? But, I'm not sure.

Here are the two pages I attempted to use Fancybox on.

Thanks.

Hello,

This problem with javascript optimizator of T3 framework. We have updated "ARI Fancybox" that T3 can combine javascript files correctly. Download and upgrade "ARI Fancybox" module please.

Regards,
ARI Soft

Thanks for the quick reply. That fixed the module on the front page, but the system plugin code still isn't working. Just does nothing...

Here is a link to the page that I'm talking about. I used this from the example in the plugin:

{arifancybox activeType="icontent" opt_width="300" opt_height="250" link="Click me" title="Hidden text"} Inline content which you want to show in fancybox goes here. {/arifancybox}

Open "System - ARI Fancybox Anywhere" plugin settings page, check that "Include jQuery" parameter is set to "Yes" and re-save plugin settings in any case (even if the parameter is set to "Yes"). If it doesn't help, could you provide temporary access to your J! backend by email that we can investigate the problem?

Regards,
ARI Soft

Figured it out... earlier I had changed the mode of System - ARI Fancybox Anywhere plugin to Anywhere instead of Content. I changed it back and it now works!

Thanks for your quick help.
