iframe content only loading once per page load

Posted by mollied - 2011/07/14 19:16

_____

I am using the fancybox Joomla module to display inline content - an iframe that contains a YouTube video embed. The iframe content will only load once. When the fancybox link is clicked after a page refresh, the iframe/YouTube content loads just fine. If I click the link a second time before refreshing the page, however, I get a blank white fancybox. How can I work around this problem? I've seen several posts with other lightbox-type plugins, but none that are Joomla-specific.

The section of the site I am working on is password protected, but I may be able to provide a test site, if needed.I have attached and image containing screen shots of the initial fancybox load and the 2nd fancybox load. http://www.ari-soft.com/images/fbfiles/images/fancybox1and2.jpg

Hello,

Could you provide link to page where we can see the problem by email?

Regards,
ARI Soft

_____

If you use "System - ARI Fancybox Anywhere" plugin, use the next code:

{arifancybox activeType="rcontent" url="http://www.youtube.com/embed/JWI-d5x39eY?rel=0&wmode=transparent&autohide=1&showinfo=0" width="640" height="510"}{/arifancybox}
