
thumbnail border color / width

Posted by DPilling - 2010/04/22 02:46

I just purchased Fancybox thinking I could specify a border color / border width for the thumbnail images. Is there a way this can be done? If not, is it on the product roadmap? Am I eligible for upgrades?

Hello,

You can specify the following CSS rule in template CSS file, for example:

```
.afancybox-image IMG
{
    border: 3px solid red;
}
```

It creates red border around thumbnails with a width equal to 3 pixels.

I tested the code you sent and it worked. I am not a programmer but tried the "Color" label to get the box to be a specific color (#A19E3A) to match my site's border color.

```
.afancybox-image IMG
{
    border: 10px solid;
    color: #A19E3A;
}
```

The code above gives me a 10px bright blue box around my imaes, it will not user the "color: #A19E3A;" code?

Also, how do I turn off the Thumbnail Tile (when loaded from CSV) but enable/retain the title in the fancybox?

Thanks,
Dave

Regarding question about border, use the following CSS rule:

```
.afancybox-image IMG
{
    border: 10px solid #A19E3A;
}
```

Regarding thumbnails title, you can add the following CSS rule:

```
TABLE DIV.afancybox-title
{
  display: none;
}
```

Or if you can wait, we'll improve 'Simple gallery' layout type that it provides ability to set these parameters in module settings within 24 hours.

Regards,
ARI Soft

We have updated 'ARI Fancybox' extension, and now it provides ability to select border parameters and hide title on module settings page. Download it in 'Member Area' and upgrade 'ARI Fancybox' module and 'System - ARI Fancybox Anywhere' plugin, please.

Regards,
ARI Soft

I'd love to see the following Fancybox enhancements:

Image Formatting:

Thumbnail Border width (px): If set to 0, no border needed

Thumbnail Border color:

Thumbnail Autofill (Yes, No) (*see requirements below)

Fancybox Border width (px) : If set to 0, no border needed

Fancybox Border color:

* Autofill:

If I have a matrix of thumbnails and Thumbnail Autofill is enabled, it will create a "box" to fill the empty matrix spaces based on the color of the Thumbnail Border color.

Use case: I have a matrix of 15 images set (ex: 3 rows X 5 columns) but I only have 13 images in my directory.

Fancybox will autofill the two extra spaces with solid boxes the color of my thumbnail border

CSV File Enhancements:

Thumbnail Title: (Options - None, Title only, all fields in CSV)

Fancybox Title: (Options - None, Title only, all fields in CSV)

Layout:

Thumbnail Row Count: Force number of rows *

* Some type of scroll - forward/back arrows will need to be put in place if matrix size is larger than display size

Thanks !

Dave

Regarding you suggestions:

Image Formatting:

"Thumbnail Border width" and "Thumbnail Border color" parameters are available in the latest version of "ARI Fancybox". We wrote about it in the previous post, and "ARI Fancybox" doesn't draw border when width is equal to 0. We will add possibility to set background color for empty cells in the next release. Regarding FancyBox border and color, we'll think about implementation this ability in a future release.

CSV File Enhancements:

'Advanced gallery' type provides ability to change HTML layout of gallery as you want, but it requires a little HTML knowledge. And you can use any fields from CSV file for 'Advanced gallery' layout type. We'll add possibility to set field name from CSV file for thumbnail title and for FancyBox title for 'Simple gallery' type in the next release.

Layout:

It's interesting ability and we'll add this in one of future releases.

Good news, "ARI Fancybox" v. 1.2.4 is available and it provides ability to set styles for empty cells and set what field from CSV file will be used as title.

Great job on 1.2.4: Couple of issues. If you look at my website <http://www.babardesign.com/PII> you will note that the program has a small calculation problem with width of the "Empty Cells". Also, there is not way to delete (empty) the new color fields, the "Color Picker" will not give up the control (focus).

I'd like to ask for two simple enhancements. I think it would be very easy for you to add and may be a simple way for me to get much of the functionality I'd like to see in scrolling thumbnails.

My requests are for you to add a "Maximum Thumbnails" and an additional Sort Order to the .csv called ".csv row order"

"Maximum Thumbnails" => The maximum number of thumbnails to show in the "image wall". It would calculate the number of rows by "Maximum Thumbnails" / COLUMN (Or just add a ROW parameter, as an alternative)

".csv row order" => The ability to output the thumbnails in the row order they are entered in the .csv file.

Use Case: I can have a gallery with hundreds of images, using the .csv file I can put my images in "priority row order", limit the display to 7 Columns * 4 rows and when the user opens a thumbnail they can still look at the whole collection of images. Of course, add an "Image" scroll feature would also be great !

Thanks for listening,
Dave

Hello,

"ARI Fancybox" has been updated. New version provide ability to sort images by order in CSV file and provide new parameters "Visible items count" which indicates how many images will be visible, other images will be shown in lightbox when an user clicks navigation buttons.

Regards,
ARI Soft
