Hello,

Use the following HTML code for "System - ARI Fancybox" plugin:

First of all I don't want to open an external page and this will open the page in a new window, not a pop-up? Is it possible to use the following syntax in an image map or roll-over?

```
{arifancybox activeType="article" opt_width="340" opt_height="500" id="15" link="Link" title="Title"}}{/arifancybox}
```

The pages will be loaded into the lightbox with the code which we provided. If you want to load an article, use the following link:

`index.php?option=com_content&view=article&id=ARTICLE_ID&tmpl=component`

Where ARTICLE\_ID is ID of the article which you want to load.

Thanks! It's working. I used "Fancybox anywhere" that's the reason it didn't work I think!  
Thanks again!

I can't find how to open a module instead of an article!

---

Load a module into an article with help of "Content - Load Module" standard Joomla! plugin or with help of "Modules Anywhere" or "Module Plant" 3rd party extension and then load the article with the module into the lightbox.
