Plug In and embed codes for video -Order #2279
Posted by phatchat - 2010/05/26 14:26

I created a custom module that I'm putting on my homepage (Video List). www.cheerspn.com

I have my own video player that I would like to embed into a lightbox.
http://www.cheerspn.com/index.php?option=com_hdvideoshare&id=164&id=164

Im using JCE Editor with Advanced Link to write module on the backend.

Any help on how to use your lightbox that I purchased to make this happen would be great!

Thanks for your time,

Chat DuBoise

Hello,

Explain your requirements, please. How you want to use 'ARI Fancybox', type text and when a user clicks by this text shows specific video from HWD video components, or display in lightbox specific video links on your site?

Regards,
ARI Soft

When a user clicks "Test Video" on homepage www.cheerspn.com the video will play. I want use embed code from my player. www.cheerspn.com/index.php?option=com_hd...mp;id=164&id=164

I've attached pic of module. http://www.ari-soft.com/images/fbfiles/images/Custom_HTML_Module_Snag.jpg

You can try the following, choose 'Remote Content' in 'Choose type' drop-down in module settings and set 'Link Text' to

'Video', 'Title' to 'Test Video' and 'URL' to http://www.cheerspn.com/index.php?option=com_hdvideoshare&view=playerbase&baserefJ=http%3A%2F%2Fwww.cheerspn.com%2F&id=64 . If you want to use 'System - ARI Fancybox Anywhere' plugin, type the following code in Joomla! content:

{arifancybox activeType="rcontent" opt_width="450" opt_height="350" url="http://www.cheerspn.com/index.php?option=com_hdvideoshare&view=playerbase&baserefJ=http%3A%2F%2Fwww.cheerspn.com%2F&id=64" link="Test video" title="Video"}{/arifancybox}

Regards,
ARI Soft

What is the full code? The code with the Text Link also? When I input this code, there is nothing being displayed to click on??

Thanks for your help

If you place this code into Joomla! content, you will see 'Test video' link and if a user clicks by this link, he or she will see video in your player in fancy lightbox.
