## Still confused.

Posted by alisamii - 2010/08/14 11:54

---

Hi, I'm trying to display a single image and have the user click and be able to load an image gallery from a local directory using ari fancybox anywhere plugin.

I have generated the thumbnail myself.

The code I am using is:

```
{arifancybox activeType="imglist" type="customtext" dir="images/stories/members/vincent_miller"} {/arifancybox}
```

The thumbnail loads, but so do the 6 images in the directory "images/stories/members/vincent\_miller". They load as full size.

All I want is that the thumbnail located at "images/stories/articles/vm\_champ.png" load with a caption in French that says "click here", at which point the fancybox opens and the six images in the gallery are displayed.

I am sure I am making a very simple mistake. I just don't know what it is.

Hi:

Am I going to get a reply from you?

I provided you with a backup of my entire joomla installation, I have patiently waited between 5 to 10 days for a reply to my questions.

I understand that your developers are on vacation, but nonetheless, that is no excuse.

Thank you,

Ali Samii

Hello,

Try now, please.

OK, Thank you.

Please explain what changes you made that enabled the lightbox to open.

---

Also, I am still waiting (and this is most important) on the ari photo gallery problems I am having.

Also, this solution is satisfactory as an interim, but what I really would like is that the image in the article be a thumbnail I have created, and not an auto-generated thumbnail.

Fixed. We have placed link to image in module settings. It seems the problem occurs when you try to use code from your the first post because your template modify article content and select image from articles and wrap it with specific HTML code.

Ok, that is much better.

Now, the Ari Photo Gallery.

That has been an issue for me for a long time now, and I provided you with a complete backup of the web site to address this issue.
