
Fatal error: Cannot redeclare class AriSimpleConte

Posted by sirtrade - 2010/08/16 09:11

We have arissmartcontent component and arifancybox installed.

When the ari fancybox anywhere plugin is enabled, we get the following message when browsing the site :

Fatal error: Cannot redeclare class AriSimpleContentPlugin in

/homepages/25/d107042431/htdocs/2010C/administrator/components/com_arissmartcontent/kernel/Components/AriSmartContent/Plugins/class.SimpleContentPlugin.php(18) : eval()'d code on line 1

I have disabled the ARI JFancyBox plugin but it does not help.

What should i do ?

Hello,

Do you use the latest version of ARI Smart Content (1.7.5)?

Regards,
ARI Soft

Hi,

Yes, we use 1.7.5 downloaded from the user area a few days ago.

Ari fancy box was installed a few days after.

I downloaded it again and verified the files in the archive, all of them are time stamped 04/26/ 2010

The plugin version appearing in the Ari SmartContent area range from 1.0.0 to 1.3.0

The ari smart content component is still running under trial mode and I have not yet received the valid forever licence.

Maybe it is related to the above problem.

Could you send the licence anyway ?

Hello,

Could you provide temporary access to your Joomla! backend by email and link to page where we can see this issue?

Regards,
ARI Soft
