PICASA and size of the ARI Image Slide Show

Posted by ffelix - 2011/02/05 15:54

_____

Hi. I need to display a number of pictures in random order taken from a PICASA album. I have set in the ARI module property a size for a 4/3 landscape windows (576x357px). Now I have a problem: when the image coming from PICASA is in portrait size, it is shown distorted to fit the 4/3 landscape window.
Is there a way to avoid this distorsion of the portrait images (for instance, leaving two vertical black bars on the two sides)? :(

_____

Hello,

Unfortunately no, transition effects look fine when they are used for images with the same size.

Regards,
ARI Soft

Thanks for the answer. Is there a way to get rid of the transition and have the basic slide show feature working correctly (without distorting the pictures)?

:-/
