
ini not editable.

Posted by tex0gen - 2011/09/22 11:14

Hi there, I use filezilla to FTP. I am unable to edit the ariimageslider.ini file for some unknown reason, i tried CHMOD but it will not allow me to do so.

Is there a way to get the images to display another way? i see in the module settings there are fields but i have no idea what to put in there.

Any help would be greatly appreciated.

Hello,

INI file is used to specify images titles and descriptions. Path to image is entered in "Image path" parameter on module settings page.

So without the ini file i cannot specifit titles or descriptions which i require.

Even with an image path in that field, nothing shows up on the slideshow. link is as follows:

<http://www.concepttraining.co.uk/joomla/templates/concept/images/jooslide/app4.jpg>
<http://www.concepttraining.co.uk/joomla/templates/concept/images/jooslide/app3.jpg>
<http://www.concepttraining.co.uk/joomla/templates/concept/images/jooslide/app2.jpg>
<http://www.concepttraining.co.uk/joomla/templates/concept/images/jooslide/app4.jpg>

If you want to show all images from specific folder, it just enough to use the next value for "Image path" parameter:

templates/concept/images/jooslide

If you want to specify path to images one by one, use the next values:

templates/concept/images/jooslide/app4.jpg
templates/concept/images/jooslide/app3.jpg
templates/concept/images/jooslide/app2.jpg
templates/concept/images/jooslide/app1.jpg

INI file should be located in folder with images and if you can't edit it, this problem with file permissions. If you can't change it, you can contact hosting support and ask them for help.

Regards,

ARI Soft

Oh sweet, i got it now, working a real treat! Thanks very much! i just had trouble finding documentation. Unless i was being a muppet and not looking in depth.

Thanks again!
