
Position of the module

Posted by jose.branquinho@gmail.com - 2012/02/29 07:42

Hello.

I've just installed your ARI Image Slider, but I've a problem in defining the position of the module on the web page.

On the template positio option (joomspirit 18), I don't have the position slideshow. I've tested the module on the top position, but it isn't the correct one. Can you help me, please?

You may check the page here.

Also, is it possible to change the colour of the background on the top?

Thanks for your help.
JosD¹ Manuel

Hello,

Set "Width" and "Height" parameter in module settings to correct values. In your case to 640 and 480

Regards,
ARI Soft
