## Some (but not all) changes are not saving

Posted by geneinop - 2012/04/08 17:55

---

I have Image Slideshow set up as a module. I am wanted to display the images on my front page. I was able to change and save all info until I get to the "Images" section. When I change any of this info, it does not save when I click save. I am trying to delete the Description file entry and to add a directory. Any thoughts here? It saved everything else and the module is published.

I am running Joomla 2.5. I have tried logging out and logging back in. All of my other modules seem to be workign fine.

Thanks,  
Gene

Hello,

Check that "System - ARI Extensions" plugin is installed and enabled.

:) That was the problem, Thanks!

I have encountered one additional issue. I have 3 pictures loaded right now, picture size is 943x698px with a quality of 9 (JPGs). The Module is sized at 915x677px. I would like to get the images sized exactly to fit. What should the native size of the image be with the above parms.

Note that I am currently hitting an issue where the image stops refreshing after 2 or 3 images, and I am wondering if I am getting a timeout as a result of the size differences.

Thanks!  
Gene

(Really liking the effects by the way and thanks for the quick reply!)

Could you provide a link to a page where we can see the problem?

After 2 page refreshes and waiting a bit, it is now working. I will open up a new thread if it quits working, or does it again.

---

Thank you very much for the quick replies.
