
Loading image transition effect

Posted by darija - 2010/03/24 11:19

Hi,

is it possible to make the initial loading image appear using the transitional effect chosen in module backend? The first image always loads in the same way (Blinds vertical from inside) and then the slideshow resumes with the chosen transition effect.

It is not such a big issue, but nevertheless, I would appreciate if you could help me with this. Thnx.

Hello,

Thanks for your report, we have fixed this bug and updated version of "ARI Image SlideShow" is available in "Member Area". Download it and update "ARI Image SlideShow" module, please.

Regards,
ARI Soft

Thank you so much for the fix and your quick response, too. Works fine now.
Ciao
