
Images cannot load in joomla 3

Posted by henryhoang - 2013/03/21 10:08

I have just installed Ari Image Slideshow in joomla 3 with template "ijoomla05'. The first image can show up, however the second one does not. So I know why ?

I also install jQuery easy but it did not solve my problem.

Please give a advise about ijoomla template running Ari Image Slideshow.

Tks in advance

Hello,

Where we can see the problem?

Regards,
ARI Soft

Hi, I got similar problem with ARI Image ..

I was installed a local server (localhos) on my MacBook Pro, OSX 10.6

I had to delete all installed, and re-install again because ARI Image slider doesn't work fine, never show again the image in the right path directory and folder privileged OK.

So..

A new install was fine just for awhile...

Again the problem persistence:

In a simple install:

jQuery no conflict : YES

Version: 1.8.2 or 1.10.1 was fine

Load jQuery Method: Google CDN

Folder Path: localhost/MySite/images/slides/sl1-image.jpg and so on...

Why I got a problem with this ARI Image slide on My MacBook Pro with OSX 10.6?

With this install, I just use my custom template, works fine on my website:

<http://www.colegiodeteologia.com/www/>

But not my local host...

I think is a rare problem with apache, OSX 10.6 or Joomla version 2.5 ...

When started from the beginning is OK, then when I try to change image, or adding new path for new image, doesn't work, loss image or no slide images..

Any problem? any suggestions?

Hello,

We can investigate the problem if you provide a link to a page where we can see the problem.

I think don understood my problem..

I got a localhost on my MacBook whit OSX 10.6
Server Apache OK
PhpMyAdmin OK
PHP server OK

ARI Image SLide:

tHE CONFIG IS ALLRIGHT.

But always in the begin the images is ok
path images is ok

..

but just for a lil changing something, thats wrong just in my Local Host computer...
maybe this is a wrong into ARI, cose when the slide fails, never show any image before...
something wrong with ARI Image Slide or.. OSX ?
Joomla without any pluguin or template with any JQuery, Bootstrap, etc.. never installed.

Check browser's error console, probably it contains a javascript error.

Send also screenshots of module settings page by email. Specify also what version of the extension you use.
