Hello,

CSV file should be located in folder with images (in your case it is /images/site/front_slides/ folder) and have the following content:

"File","Title","Link"
"Burger_dining_out.jpg","Dining Out","www.boulevard-magazine.com/restaurants.html"

ARI Soft

however

the base url of the domain is automatically inserted

so

"Burger_dining_out.jpg","Dining Out","restaurants.html"

BUT that also means I can't link to external urls

e.g.

"HBFF-Beauty-Lounge_720.jpg","Health Beauty Fashion and Fitness","www.tbl-thebeautylounge.com"

as it becomes www.boulevard-magazine.com/www.tbl-thebeautylounge.com

This how I have it.

"File","Title","Link"
"Burger_dining_out.jpg","Dining Out","restaurants.html"
"HBFF-Beauty-Lounge_720.jpg","Health Beauty Fashion and Fitness","www.tbl-thebeautylounge.com"

how ever the link created for HBFF-Beauty-Lounge_720.jpg is www.boulevard-magazine.com/www.tbl-thebeautylounge.com

of course resulting in a 401

Use the following link:

http://www.tbl-thebeautylounge.com

instead of:

www.tbl-thebeautylounge.com
