Problem with random display and about controls

_____

Hi, i'm displaying my slideshow in random order (Random is enabled in modules settings) and it works fine.

Just one question: how can I get the first image randomized? Now it shows always the same first picture when slideshow starts.

Secondly, is it possible to hide next/previous image controls if there's only 1 picture in slideshow? I don't mean from module settings but the module itself could count the amount of images found and decide to show controls if needed.

Hello,

Download and upgrade 'ARI Image SlideShow' module. New version shows the first image in random order if 'Random' parameter is set to 'Yes' and provides 'Auto' value for 'Hide buttons' parameter. If this parameter is set to 'Auto', the module will hide control buttons if it contains only 0 or 1 slide.

Regards,
ARI Soft
