
(SOLVED) How to mix Readon button with lightbox?

Posted by rexous - 2011/01/25 14:33

Hi guys,

Here is the code to open article inside sexylightbox:

Show article

And here is code for Readon button:

Read More

Both of course work separately.

How can I mix them together so that when I click on readon button sexylightbox will open the article?

Is this even possible?

Any help will be highly appreciated.

Hello,

Provide more details please. What is "readon" extension? Where we can see it?

Regards,
ARI Soft

Sorry for not being more specific but "Readon" is a typography class which creates buttons with mouse over effect. Its build in css file of my template.

See attachments for an example.

In order to use it inside any html content I write:

Read More

This is instead of just having simple text link.

Hope this helps B)

"ARI Sexy Lightbox Lite" is attached to all anchor (tag) with rel="sexylightbox" attribute. You can modify code which generates "readon" buttons and add attribute rel="sexylightbox" or you can provide link to page where we can see this button and temporary access to your Joomla! backend by email and we will try to help.

I thank you greatly for very fast answer, you guys are always the best.:woohoo:

I'll play around a bit with it and hopefully post solution for the problem here in the next couple of days.

Got it :woohoo:

Ofc it was really simple. I just added in front and bingo problem solved.

Full code below: (This will work only for people who have ".readon" class inside their template.css)

Show article

TIP!

Just change your article_id from "167" in my example to any of your numbers.

If you want to open a module instead of article with readon button here is the code:

```
{arisexylightbox activeType="module" width="600" height="400" id="224" link="Show Joomla! module" title="Joomla! module"}}{/arisexylightbox}
```

Tip!

Change your id number, link and title to yours and now you can open modules in sexylightbox with readon button.
:woohoo:

Posted by admin - 2011/01/27 12:46

One note, this code for "ARI Sexy Lightbox" extension, not "ARI Sexy Lightbox Lite".
