Inline Content within a Custom HTML Module

Posted by blazi - 2011/02/16 02:13

_____

I have successfully created inline content to use in an article using the description info in the plugin. What I need though is to have the inline content reside in a custom html module - however when you click the link within the module the lightbox doesn't work and nothing happens with the link.

The description info:

Test content

Show HTML

Is this possible to do in this plugin?

_____

Hello,

"ARI Sexy Lightbox Lite" is content plugin. Joomla! executes content plugins only in articles, not in module or other content. It is standard Joomla! behaviour. If you want to use sexy lightbox anywhere, you can be interested in ARI Sexy Lightbox package. It contains "System - ARI Sexy Lightbox" plugin which provides ability to use lightbox in any content.

Regards,
ARI Soft
