
lightbox - using of loadposition

Posted by Antonino Migliore - 2011/02/26 13:37

Hi,

We bought the sexy lightbox and we are searching for documentation.

I read a post where you said : send an e-mail request and we will send you...well I need that.

1) Documentation

Can you send me a copy of it ?

2) use a lot of times a component

My goal is : using 10 times the lightbox link in my article to create 10 links for youtubevideo without create 10 copies of lightbox module.

Can I do it ?

Maybe using parameters on {loadposition mylightbox ...} ?

thanks

=====

Hello,

1. Documentation can be found in "Description" field in plugins and module settings page.

2. You can use "System - ARI Sexy Lightbox Anywhere" plugin. Code looks like:

```
{arisexylightbox activeType="rcontent" width="800" height="450" url="http://www.youtube.com/watch?v=WyA1dzfKygw" link="YouTube video" title="Video"}}{/arisexylightbox}
```

Regards,
ARI Soft
