
Loading Image not showing.

Posted by daverosen - 2011/02/27 20:20

I'm using Joomla 1.5, and I have many thumbnails on a page that each links to high def pictures of the thumbnails. It takes about 5 seconds for each high def picture to load, and what I was hoping would work is the Loading Image, so that people would know the big image is loading.
Also, is there a way to make the Loading Image background black instead of transparent?

Help?

Hello,

Download and upgrade the plugin. It should resolve problem with loading image.

Regards,
ARI Soft
