SOBI and Ari

Posted by Skye - 2011/03/02 21:47

_____

Ok, so when the album name is hardcoded like this - it works:

But when I insert the variable now it does not - although it WAS working, and stopped two days ago.

Now I get an error instead:

Warning: simplexml_load_string() : Entity: line 1: parser error : Start tag expected, '

_____

Hello,

Regarding to this code, it can be a problem with data in "$fieldsObjects" object. Could you provide content which are generated by this code or temporary access to your Joomla! backend by email that we can investigate this issue?

Regards,
ARI Soft

_____

THANKS!

I have emailed the access to you, as well as how to get to the affected area. I was so PROUD when it worked before !!

_____

The problem occurs because requested Picasa album (webdesignportfolio) doesn't exist. Set correct picasa album (for example portfoliowebsites) and it will work.

Regards,
ARI Soft

_____

Thank you so much! I feel a little dumb now.

Is there anyway to gracefully degrade? Like:

"That album does not exist" rather than throwing an error?

_____

Download and upgrade "ARI Sexy Lightbox" module. New version of the extension provides better handling of errors from Picasa service.

Regards,
ARI Soft
