Download button
Posted by daverosen - 2011/03/07 08:13

How do I put in a download button so users can download the photo they are viewing?

Extension's archive contains javascript source file in "install/source" folder. You can modify it for your needs and add download link.

What would I add?
(I can read code, but can't write it)

Tried to fill in a few scripts that I found via google. No luck.

Any ideas of what I can put in?

You can try to modify "show: function(caption, url, rel, force)" method, it is used that display active content in the lightbox.

Where would I add that to? What file, what line?

==========

Re:Download button

The plugin uses \plugins\content\arisexylightboxlite\js\jquery.sexylightbox.min.js file. This is obfuscated file, original version you can find here.

PS: BTW, we are going to add ability to show download link in the next version of "ARI Sexy Lightbox".

It requires additional investigation and custom coding, we just provided place where code for adding download links can be placed.
