
404 error on localhost installation

Posted by RedSpiderWeb - 2011/04/02 23:48

Hi

Firstly, many thanks for this plugin.

Unfortunately I seem to be having some issues with it and I don't think it's the red wine I've been drinking!!! I have installed and enabled the plugin successfully and double and triple checked by coding and all is in order.

I have two folders on my localhost server with the following names

JOOMLAROOT/images/stories/adc/lightbox-full

JOOMLAROOT/images/stories/adc/lightbox-th

I specify the path to the thumbnail in the `tag` as follows:

`images/stories/adc/lightbox-th/img_th.jpg`

and to the enlargement in the `tag` as follows:

`images/stories/adc/lightbox-full/img.jpg`

The thumbnail displays as expected and the lightbox fires up onclick; however, inside the lightbox window I get: "404 Error - The requested image could not be found"

If it helps, I'm running Joomla! 1.5

Any assistance would be gratefully received.

Many thanks,

Carmen.

Hello,

Provide HTML code which you use and send page files of the page with the lightbox please.

Regards,

ARI Soft

Thanks for your reply.

The HTML code for a page with two pictures for enlargement is as follows:

As for sending page files, this is on a localhost server so what is the procedure for doing that?

Many thanks for your time.

Carmen.

If SEF mode is enabled in Joomla! settings, try to temporary disable it and check the lightbox. Try to open large images in a browser:

<http://domain.com/images/stories/adc/lightbox-full/2006conwy1.jpg>

<http://domain.com/images/stories/adc/lightbox-full/2006conwy2.jpg>

Where domain.com is domain name of your site.

Open the page with the lightbox in a browser, choose 'Save As' link in browser's menu, save all page files, archive and send them by email.

Regards,
ARI Soft
