Hello,

If you use the extension and some elements on a page are located over lightbox overlay, provide link to page where we can see the problem that we can investigate it. It can be a conflict with site template or 3rd party extension styles.

Regards,
ARI Soft

This is not the extension problem. This problem with inline content which you try to load into the lightbox. It contains the next javascript code:

document.write

which causes the problem. As we wrote in letter which we have sent to you recently, load form into lightbox as remote page instead of inline content.

i tried this code and it work a while ago

{rsform 3}

Â

i want to pop up a form you see

Open HTML page source and you can see that form container contains the next code of Google Analytics which causes the problem:

document.write(....

You can resolve the problem in the next way:

create new article and place the next code in it:

{rsform 3}

remember ID of created article and use the next code for lightbox:

Where ARTICLE_ID is ID of created article.

now it seems that the lightbox doesnt work anymore i dunno why

tried using this from you demo page.
Any HTML content
Show inline content in modal window

yet it doesnt work

Our previous post contains description of the problem with your code. Previous post also contains solution how to fix it.

PS: If you wish, you can provide temporary access to your Joomla! backend by email and we will help to fix the problem.
