
centering images

Posted by gowzel - 2011/05/18 16:42

I have put 3 images into an article and everything works great except I would like the thumbnails to be centered horizontally across the page instead of where they are now which is to the left. I did read somewhere about editing the css file but:

I do not know where to find the css file or what to edit it with and secondly if the css file was edited would this mean that any images I have placed in other articles would also be centered even though I may want them to be to the right or left. Many Thanks

Hello,

Provide HTML code which you use or link to page where we can see the problem.

Many thanks

The page is at:

<http://www.lancsmarine.co.uk/index.php/services/battery-management-adverc>

And the code:
