
Border on image breaks

Posted by svandomelen - 2011/06/28 00:36

When we have a full-screen browser windows on a monitor with 1920x1200 resolution, the border does not encompass the image. It breaks in the upper left corner. If we shrink the windows down a bit (I am guessing below 1280x1024) then it looks fine.

We have tried this with IE7, IE8, IE9 and Firefox 4 with the same results.

Do you know if there is a screen size limitation or other constraints?

Hello,

Could you provide link to page where we can see the problem?

Regards,
ARI Soft

Unfortunately, we had to go 'live' last night and I could not do so with this tool. We had to act quickly and replace it with JCE MediaBox.
