## Lightbox lite doesn't work with Joomla 1.7

Posted by infotel - 2011/11/10 15:45

---

Hello,

I tried to do a simple lightbox inside my code and It doesn't work. I just copy paste examples after that :

Show google site in popup

And it didn't work too. I don't know if I forgot something or not.

Regards,

Pierre Sellin

Hello,

Could you specify what exactly doesn't work? Does the lightbox not appear or do you see empty lightbox or something another?

Hello,

First, thank you for your quick answer.

The lightbox doesn't work at all.

It links exactly like if I don't have a lightbox.

Provide a link to a page where we can see the problem. It can be a conflict with a 3rd party extension.

I'm sorry, it is for a professionnal project, on a local server, so I can't give you a link to my project.

But, I have a question, maybe it will be a way to my solution :

Do I have to include the javascript by myself, or is it automatically done by the plugin ?

The plugin loads all necessary javascript and CSS files automatically. Could you send page files of a page where the problem occurs by email? This process is described [here](#).
