
Multiple content lightboxes on a single article.

Posted by John Main - 2012/02/18 21:07

Hello,

I am trying to use this multiple times on a single article, however the text in the lightbox only displays the text from the very top one.

The link name and title of the lightbox are correct, it is just the text that is the same on every one.

Any help would be greatly appreciated.

John

Hello,

Provide plugin code which you use.

"id" and "inlined" attributes should be unique. For example use the next code:

Test content 1

Show HTML 1

Test content 2

Show HTML 2

Thanks, that worked a treat.

Looking forward to using more of your products in the future.

Regards,

John
