## No lightbox after update joomla to 2.7

Posted by esorone - 2012/10/09 20:35

---

Hello,

I use the content ari lightbox lite for quit a while now and it all worked fine.

But at this stage something strange has happend. When I click on a image, it will open in a new page, but no lightbox. I use the rel="lightbox" (change this in the plugin settings), but I can't find the error.

I use the code shown below. Maybe it is the dubble // between the "duburg\_final//images/", but I don't now where to change the code.

I am creating the site on a test server (small nas). And the actual URL is : Here (PS..The site is still under development)

Does someone have any idea, where to look for this error?

Thx in advance!! I really would appreciate your help

Hello,

Open browser's error console (press Ctrl + Shift + J in FireFox browser) and you will see it contains a lot of javascript errors which are not related to "ARI Sexy Lightbox Lite", but prevents execution of plugin code. Fix the errors and the plugin will work fine.

Regards,  
ARI Soft

Whow.. that is fast. Thx

Thank you, I will try it right away. And will come back with my feedback.

Hello,

I tried to get rid of the errors, but is was harder then I expected. Therefore I created an extra site. With less plugins and modules.

But unfortunately it did do anything, but I got no errors left. :P

So I hope that you have some ideas left.

The new test site: Test site

Thanks again.

Hello,

Could you explain what error(s) do you mean?

Hey Again.

I was pointing to the browser errors. See your previous post.

Thanks for your time

Open HTML code of the page, tag doesn't contain "rel" attribute so the lightbox doesn't work.

Hello,

I solved the issue. It was related with a error. But this one is in Joomla itself.

I had to remove the Jcaption. And after this everything worked like a charm.

I did find my solution over [Here](#)

Thanks again for your help
