
Combining with YooTheme ZOO Component

Posted by tank - 2010/04/15 05:03

I'm having some issues implementing ARI Sexy Lightbox Lite with my current installation of YooTheme's ZOO Component.

Whenever I try to display the link to open the html page in the lightbox, it just opens the page in the full window - ignoring the lightbox.

I can't work out why this might be happening, other than inherited values from the ZOO template. I'm pretty new to all this stuff so any help / ideas would be appreciated.

Thanks!

Tank

I am trying to show the link on the item page.

Code:

Hello,

'ARI Sexy Lightbox Lite' works in Joomla! articles, but not in Zoo articles. If you want to use sexy lightbox anywhere, you can be interested in 'ARI Sexy Lightbox'. It comes with 'System - ARI Sexy Lightbox' plugin which provides ability to use lightbox anywhere.

Regards,
ARI Soft
