
Image popups open in another window

Posted by Aixue - 2013/04/27 13:51

Hello,

I have a problem with Ari Sexy Lightbox Lite, when I click on the pictures they open in another window (with the black background) instead of a popup in the same window.

My website : estelleenchine.com

The strange thing is, the Ari Sexy Lightbox demo page works fine for me but I have the same troubles with the Ari Sexy Lightbox Lite demo page: the popups open in another window as well. I tried both on Firefox and IE and the problems are the same, both for my website and the demo pages.

Do you know where this could come from? Here are the settings (I did not change the advanced ones).

Thank you!

Estelle

Hello,

Provide a direct to a page on your site where we can see the problem (home page doesn't contain "ARI Sexy Lightbox Lite").

PS: The demo page has been fixed.

Regards,
ARI Soft

Thank you for your answer, I tried to insert the code but it's not working, codes are not my thing at all... :(

If I buy the commercial version (Ari Sexy Lightbox), will I still have to insert code? The plugin I used for my previous website is not compatible with Joomla 3 so I can't use it anymore, but I did not have to insert code, only click on an icon in the editor, it was so quick and easy...

If I buy the commercial version is there a particular editor (JCE, JCK...) that supports the plugin and module?

Thanks!

Estelle

Currently plugins from "ARI Sexy Lightbox" package don't support editor buttons, but with "System - ARI Sexy Lightbox Anywhere" plugin is necessary to enter plugin code instead of HTML code. You can find documentation for the extension [here](#).
