## Newsflash Module?

Posted by Widget - 2010/05/05 20:20

---

Can I get this to function using a Newsflash module? I have tried and it will not read the Sexy Lightbox code from the Article HTML, therefore it will just open a new browser window and taking people off the site.

Does anyone have any suggestions?

Hello,

Could you explain what code you try to use with 'ARI Sexy Lightbox Lite'? Maybe you can provide link where we can see it?

Thank you for getting back to me so quickly, yes, go to [www.whosdis.com](http://www.whosdis.com). Look at the hardware page where I have the module working, then go to the "request a quote" page to see the newsflash module.

The newsflash module will not pull up the Lightbox code that is embedded in the article.

It seems required javascript files aren't included, could you provide temporary access to your Joomla! backend by email that we can investigate this issue?

okay. I just sent it to [admin@ari-soft.com](mailto:admin@ari-soft.com)

thanks.

Okay, I sent the information. Did I not send it to the right email? Noticed that no one logged in. It's been about 4 hours. Thanks.

'ARI Sexy Lightbox Lite' plugin is content plugin. It means that it works in articles (com\_content component), it doesn't work in other components or modules. We have updated the plugin and it can load necessary client files always for all articles. Lightbox for 'News Flash' module will work if it's shown on an article page.

PS: ARI Sexy Lightbox contains 'System - ARI Sexy Lightbox Anywhere' plugin which provide ability to use sexy lightbox in any Joomla! content.
