
No Dim of background

Posted by benuarts - 2010/05/12 21:39

Great plugin, seems to work great except the background doesn't dim out like it does on the demo page. Looks in all the params and can't seem to figure out how to turn that on. Also when using the web developer style viewer in firefox, I do't see a conatiner div that I could change.

Any ideas would be great. Thanks so much.

Hello,

If you want to set background of lightbox for external pages or inline content, you can use the following code:

Goooooogle

In other words, add background= parameter to URL.

Any ideas would be great. Thanks so much. I've got the same problem, the background out of the lightbox (over the rest of the website) doesn't dim down, when lightbox opens. I uses Firefox 3.6.3 in MacOSX.

@admin: the problem is not the background in the lightbox, but out of the lightbox!

any solutions?

regards maeck

Hello,

Could you provide link to page where we can see this issue?

Regards,
ARI Soft

Wow, great! Now it works just fine!
Thanks a lot!

Little question: what is the little dot in the left top corner of the lightbox?
If I hover over it, it seems to be a link?!

regards maeck

It seems to be the close-link (in repeated form), could it be?

thanks a lot!

btw: the version-number is still 1.0.6, despite all the last two changes.

regards, maeck
