SexyLightboxLite - Timing of when JS loads?

Posted by gotroppo - 2013/08/25 14:29
_____

Hi Folks,

Love the plugin - does exactly what I wanted but occasionally it gets caught up. On the following page:

http://casadelcastello.bytheraintree.com/index.php/apartment/inclusions/fitout

the images found in the Accordion work perfectly. However, the Floor Plan at the top - as soon as I include the rel="sexylightbox" directive, all of them stop working.

If I look at the code, it would seem the earlier invocation of the Plugin results in the Javascript loading in a different order. This doesn't work:

Instead of this which does:

Presumably there's a JS conflict somewhere so is there any way to trick the plugin to load last?

Regards, Mark

Hello,

Sorry, but what difference between javascript codes which you sent? They look the same.

Regards,
ARI Soft

Ooops, sorry. The 1st one should've had the plugin JS at the top of the list:

Perhaps a better example is the following link. This page is used in the accordion mentioned above - it works in the accordion but not on the individual page because the JS loads in a different order.

Check that you use the latest version of the plugin (v. 1.2.3) and set "Load jQuery method" parameter to "Local copy" in plugin settings.

Perfect, that's did the trick (Load jQuery method") - works perfectly now.

Many thanks for your assistance.

Regards, Mark
