
Call photo gallery with a specific image directory

Posted by flycom - 2011/11/08 20:45

Hi Support,

I added the following text to an article to call a photo gallery but it does not work. Issue: directory parameter is ignored.

```
{ariphotogallery moduleId="44" dir="images/001-galleries/002-rideyukon"}Show gallery{/ariphotogallery}
```

If I add the directory parameter directly in the module parameter section and use {ariphotogallery moduleId="44" {/ariphotogallery} to call the gallery it works.

How ever this does not help me as it want to create an article with many different links to different albums.

So what is the correct syntax to call the module with a specific image directory ?

Thank you for your help

Bruno

Hello,

Remove moduleId parameter from the first sample. Correct code will look like:

```
{ariphotogallery activeType="imglist" dir="images/001-galleries/002-rideyukon"}Show gallery{/ariphotogallery}
```

Regards,
ARI Soft
