Can AUDIO be added to the quiz questions?
Posted by price1 - 2008/08/03 13:55

_____

Is it possible to add streaming audio to any of the questions?

If so, how do we do this?

_____

Yes, you can if this is supported by the WYSIWYG editor you are using in your Joomla! system. You can use "embed media" button of your editor to do this: http://www.astahost.com/info.php/how-embed-swf-files-joomla_t10713.html or you can use third-party solutions, for example
http://extensions.joomla.org/component/option,com_mtree/task,viewlink/link_id,812/Itemid,35/

_____

Great. I'll check that out, but to save some time, we've already tried the 1PixelOut Player plugin and the AllVideos plugin and neither of them work using their specific tags.

It would appear that your component does not process plugins.

Is that possible, or is embedding the only answer at this stage?

_____

Yep, the content plugins are not processed when displaying quiz questions. The only way is to use "embed media" button or something similar - what is supported by you WYSIWYG editor.

Fantastic .. that really helps!

I really appreciate the speedy and thorough answers too!

Thanks again.

_____

OK .. with respect, your advice on this issue is a joke. Which is suprising given that you've answered all of my other questions so well.

I asked whether ARI QUIZ was capable of processing plugins and you told it was not. But then you point me to a Joomla plugin as an answer. What the??

ALLVIDEOS PLUG-IN DOES NOT WORK!

The other page you sent me to has absolutely no solution on it wahtsoever.

Did you even read the content of the pages you suggested I visit?

For the record, no matter what I try .. no matter what code I manually enter .. no matter whether I turn my editor off so I am forced to enter code or not .. your component does not render any kind of streaming audio whatsoever.

PLEASE, I need a solution to this problem.

_____

Ok,

Let us be clear. Content plugins are not processed when displaying quiz questions. The only way for now to embed audio is to use "embed media" button or something similar - if it is supported by you WYSIWYG editor. As it is described for some editor in the link we suggested you: http://www.astahost.com/info.php/how-embed-swf-files-joomla_t10713.html: "Try going to Add New Content. Then, in the WYSIWYG editor, there is a Flash button (represented by te Flash .swf file icon), click on it and follow the steps from that. I think you will need to upload your .swf file first and then provide the external link to it." This describes how you can add sudio in swf format.

We are going to add ability to process question content with plugins in next couple of days.

Regards,
ARI Soft
