Question count in test results

Posted by netsprint - 2008/08/07 14:20

I recently made some testing and found the following bug.

I set the question count in admin panel to 50. During the test there were 50 questions asked and answered, BUT in test results the total questions were:

- 48 on first attempt
- 49 on second
- 48 on third

The percentage was also calculated form 48 49 and 48.

When I clicked on "View" details in "Quiz Results" tab it showed 50 questions with answers...

What could be the problem?

Okey, it was my mistake. Please close this topic.

In two questions I forgot to set "Score" so it was 0 and AriQuiz didn't count these two questions.
