
Question about the email feature.

Posted by jlb4350 - 2008/08/11 16:04

I've just purchased and have been configuring this component and have a couple of questions:

1. If we set up a quiz that is mostly free text, it difficult to accurately grade the test as the user could enter any combination of text answers and you have to check each question individually in the back end. Is there a way to have the automatic email send the user's answer information to the predefined email address for scoring rather than only send the number of answers answered correctly/incorrectly?

Thank you for your help.

This can be done by custom development. If you are interested please drop us a letter with your requirements and we will estimate how long it will take us to implement this for you. Most likely it will take 1 work unit: <http://ari-soft.com/Custom-Development/Support/Work-Unit/Detailed-product-flyer.html>

The second option is to wait for new release - we are planning similar feature in approximately 2 months.

Regards,
ARI Soft
