## Quiz answers with comment in the end

Posted by dwayinc - 2008/08/14 20:04

---

I believe it is important to present students with the answers to the quiz. This would allow them to print and study it.

I would like to request a feature or new module where:

Students are redirected or have a link with a page with answers

Page with questions and answers may be printed

The option to display questions and answers is optional

If you agree with this suggestions please add your comment to this forum.

Hello,

We are going to complete the detail statistics functionality next week. This will allow to view questions/answers in detail. The only options is there is no print for now. You would be able to print the page only via standard browser functionality or order custom development for this.

Regards,  
ARI Soft

Thank you for your posting. Anyone who is in website business for while realizes that once the website is established it tends to improve over time. Improvements are sometimes done by suggestions of customers like myself and others.

I think the product is good and I am glad you have developed. I will purchase future modules and advanced features if available in the future.

## I want to purchase this product..

Posted by teachen34 - 2008/08/23 01:28

---

I am working on a mac pro tower. I have my site running on joomla. I am new to all of this and this will be my first time buying a product and then installing it.. Question: How do you instal this product? I think it would be quite easy, but please explain.. thank you . Question: Will I be able to install Ari Quiz using my mac, or do I need a PC? Question: Do i need to know HTML or CSS to create the quizzes and tests or is it as simple as creating sections and categories? Question: I read a school teacher's post wanting the answers to be displayed if the student was to get the wrong answer. The responder said that, that component was going to be available the following week... I think that would be next week. Well, I would like that component too, because I too am a teacher. If i buy Ari Quiz today, would i have to pay for that component later, or if I bought Ari Quiz next week, would it already be in that newer version of Ari Quiz? Last Question: Will their be any brands on my site that says ARI QUIZ? Thank you very much..

Hi,

If you want you may visit my website at [www.learntheecg.com](http://www.learntheecg.com) and see how the quiz looks. Just follow the link in the menu where is says quiz.

---

I know your questions are for the website support but what the heck let me give you some of my experience.

Ari Quiz was installed using the joomla installation module.

I do not see the Ari-quiz brand on my quizzes. You do see Ari-quiz on the backend. No big deal.

Ari-Quiz does not print a certificate. If you need that you should now this.

It is simple and intuitive. No need of complicated coding and HTML.

Mac or PC if you access your site joomla administrator area at the end of the day it is just an upload of file process for joomla to autoinstall.

Hope it helps.

Thanks for the previous answer.

Our answers:

1. ARI Quiz is installed using standard Joomla! installation procedure.

2. No difference whether you use Mac or PC, since Joomla! is web application.

3. No need in HTML or CSS knowledge, the stuff is easy, intuitive and powerfull.

4.

If you purchase ARI Quiz component today you will be abl to get free updates for a year. So you will get any new functionality for this period.
