
Quiz Results for Score Ranges?

Posted by kobari - 2008/09/30 04:10

Hi,

I have looked at the demo and saw that you can assign scores to questions. But, is it possible to display some result based on your score. Something like:

If you total score is between 0 - 20: You should study more, etc.etc.etc.

If you total score is between 20 - 40: Some other text

If you total score is between 40 - 60: This is an excellent result, etc. etc.

Thanks.

Hello,

There is no such functionality for now. We are going to add functionality called "Importance scale" in the next release that will do the thing similar to your description.

Regards,
ARI Soft

Any idea when this would be?

Also, one more question: Is Ari-quiz running in native mode on Joomla 1.5 or in legacy mode?

Thanks a ton...

=====

Re:Quiz Results for Score Ranges?

Posted by admin - 2008/09/30 10:33

We are planning to add this in two weeks or so.

ARI Quiz component runs in Joomla 1.5 native mode.

Please note: once component is purchased customer can receive free updates for 1 year.

Regards,
ARI Soft

Thanks for the reply.

Will buy Ari Quiz as soon as this feature is added/implemented.

Re:Quiz Results for Score Ranges?

Posted by admin - 2008/10/04 18:13

The feature will be available next week. We will let you know.

Regards,
ARI Soft

Hello,

The feature is almost completed. We are testing it right now. We plan to release it and setup on demo sites tomorrow.

Regards,
ARI Soft

Thanks a lot for the update.

Re:Quiz Results for Score Ranges?

Posted by kobari - 2008/10/17 04:24

As a side note, I wanted to ask you what your take is on submitting patches to ARI_QUIZ.

I am the author of original com_quiz on Joomla, but could not continue with improving it (or moving it to Joomla 1.5) due to time constraints. But, I am pretty sure that I will add some functionality to ARI Quiz, and would love to submit that functionality back to you guys so that I won't need to maintain a diff and apply it every time you modify your component.

I had this very issue with Joomla 1.X, i.e. they did not have caching and performance was terrible, so I had to add caching on 1.0 which improved the performance 5-10 folds, but every upgrade was a nightmare for me. Likewise, every fix that I did for various components was a similar nightmare.

Is this possible?

Thanks.

PS: Wanted to discuss this over PM, but did not find private messaging on your board?

Re:Quiz Results for Score Ranges?

Posted by admin - 2008/10/17 09:30

Hello,

We appreciate your willing to help.

Since ARI Quiz comes with obfuscated sources we don't accept patches.

Instead of this we can propose you to submit your ideas to ARI Quiz Feature Request topic.

Regards,
ARI Soft

Re:Quiz Results for Score Ranges?

Posted by admin - 2008/10/17 15:07

Hello,

Result Scale feature is available with ARI Quiz 2.1.2. Administrator can set up ranges for scores of passing test. In accordance to these ranges text template, print template and mail template can be set.

Regards,
ARI Soft

I am pretty worried about the fact that we cannot modify/fix functionality, since everytime I need something new, we need to ask you for it..

But, I checked the functionality you implemented, and it is 90% there. But, one extra feature request is about question types specifically for Result Scales. Right now, the whole quiz is based on right/wrong answers, e.g. answer is either right or wrong. What we need is something like a weighted score depending on the answer you give (this functionality existed in com_quiz, and it was immensely useful for analysis type of questions).

Just to give an example, for each question, every choice has a different score, e.g.

What color do you like most:

- a) Red -> 10 points
- b) Blue -> 20 points
- c) Green -> 30 points

How would you characterize yourself:

- a) Funny -> 5 points
- b) Serious -> 10 points
- c) Brilliant -> 15 points

So, if I pick Blue and Serious, my score is 30 points, and with this score, I would like to apply result scales.

This should be fairly simple, given that most of the functionality is already there. From what i see, you just need to introduce a different Question type...

Is it possible to add this?

Thank you.

Hello,

This functionality is in our plans for one of future releases. We already talked about this here.

Regards,
ARI Soft

Has this feature been deployed?

I saw the 'Results Scale' which offered percentages, but didn't let me specify what those ranges would be valued / labeled.

For instance:

Range | Label

0 - 60 % : F
61 - 70 % : D
71 - 80 % : C
91 - 90 % : B
91 - 100% : A

=====

Re:Quiz Results for Score Ranges?

Posted by admin - 2008/11/21 10:17

We not really sure why would you like to label the ranges. Result scale feature lets you select different templates for example for mail, print to display users who have scores that get in different ranges.

For example you may want to show "poor" template for user who have score 0-30%, "average" template for users with score 51-80% and "great" template for users with score 81-100%.

This ranges don't have any labels and they shouldn't.

After you set up result scale you should give it a name. Then in quiz settings just select it for Text Template setting.

Please let us know if you have any other questions.

ahh .. I'll give that a try.

Makes sense.

And my apologies if this was an RTFM.
